PROFESSIONAL SUMMARY

As an IT undergraduate with over 2 years of industry experience, I have developed a strong passion for software engineering, cloud computing and DevOps engineering. Throughout my internships and professional engagements I have gained hands on experience in designing and developing web and mobile applications, implementing CI/CD pipelines and managing cloud based infrastructure. I am enthusiastic about leveraging my technical expertise and academic background to solve real world challenges, collaborate with diverse teams and deliver impactful solutions. With a solid foundation in software engineering, strong problem solving abilities and proven industry experience I am well equipped to contribute effectively to any organization.

TECHNICAL SKILLS

Web & Mobile Development

- **Frontend:** HTML, CSS, JavaScript, Bootstrap, Ant Design (Antd), React, Next.js, Angular, Flutter, React Native
- **Backend:** Node.js, Express.js, Nest.js, Spring Boot, Next.js, Flask, Fast API, ASP.NET

Programming Languages

- Java, Python, C, Dart

Databases

- MongoDB, Firebase, MySQL, PostgreSQL

Version Control

- Git, GitHub

Cloud & Deployment

- AWS, Vercel, Contabo

Tools & Applications

- Figma, Postman, Arduino, Canva

Project Management

- Jira, Discord, Notion

Machine Learning / AI

- TensorFlow, Keras, LangGraph, LangChain, RAG

Code Quality & Testing

- SonarQube, Test Automation

WORK EXPERIENCE

Associate Software Engineer - Vectorium Labs

August 2025 – January 2026

- Led the development of one project and contributed to another, taking ownership of core features and end-to-end delivery.
- Designed and implemented scalable architecture components to improve system performance and maintainability.
- Developed and integrated a secure payment processing flow within the application.
- Implemented report scheduling functionality for the Sensatecs platform to automate periodic report generation.
- Contributed to an AI Voice Agent system using Agentic AI architecture, where multiple LLM-powered agents were designed to handle different user tasks dynamically (e.g., intent handling, action execution, and response generation).
- Implemented SMS notification workflows and HubSpot CRM integration within the AI Voice Agent system to enhance automation and external system connectivity.
- Collaborated with team members by guiding task implementation, conducting code reviews, and supporting feature development.
- Participated in client meetings to gather requirements and translate business needs into technical solutions.

Software Engineer Intern - Vectorium Labs

March 2025 – August 2025

- Worked as a Software Engineering Intern on multiple real-world projects, including an AI Voice Agent and the Sensatecs platform.
- Developed frontend and backend features using Next.js, Node.js, Supabase, Redis, and PostgreSQL.
- Handled application deployment on AWS, ensuring reliable and scalable environments.
- Built and maintained CI/CD pipelines using Jenkins to automate build, test, and deployment processes.
- Ensured code quality and reliability by performing static code analysis with SonarQube.
- Collaborated with cross-functional teams to deliver features efficiently and on time.

Backend Developer (Part-Time) - Crytec Labs

August 2023 – August 2024

- Contributed to the development of a full stack tuition management platform with web and mobile applications serving students, teachers and administrators.
- Built and maintained scalable backend APIs using Node.js and Express.js to support core platform functionality.
- Deployed and managed applications on AWS using Docker based containerization and load balancing for high availability and scalability.
- Implemented caching mechanisms to improve system performance and reduce server response times.
- Collaborated with cross functional teams throughout the software development lifecycle, from requirement gathering to deployment and maintenance.

PROJECTS

VehicleMart: Full-Stack Vehicle Rental Platform

Sept 2025

- Built a complete vehicle rental platform connecting vehicle owners with renters for hourly and daily rentals
- Implemented vehicle search with location, category, and date/time filters
- Created interactive map for vehicle locations and review system for vehicles and owners
- Developed owner dashboard for vehicle management and user reservation history
- Built dual interface (User app + Admin portal) with fully responsive design
- Frontend: Next.js, Redux Toolkit, Tailwind CSS, Axios
- Backend: Node.js & Express REST API, MongoDB Atlas, JWT Auth, Cloudinary, Email Notifications
- Deploy: The system on Contabo servers and use Jenkins for CI/CD pipelines. Additionally, we use Grafana to monitor user engagement and system activity.

Smart AI Metadata Generator for Images

Feb 2026

- Developed an AI-powered web application to automatically generate titles, descriptions, and keywords for stock images using Generative AI.
- Built a scalable microservice-based system with React.js, Flask (Python), PostgreSQL, and Cloudinary for bulk image processing and storage.
- Implemented Docker-based containerization, CI/CD pipelines, and Nginx reverse proxy to enable secure, automated deployment.
- Technologies & Tools: React.js, Flask, Python, PostgreSQL, Cloudinary, Docker, CI/CD (Jenkins), Nginx, Generative AI libraries

Z-Score Predictor for Sri Lankan University Admissions | Machine Learning Project

Feb 2025

- Developed a regression model using LightGBM to predict UGC cutoff Z-scores based on historical data (2020–2025).
- Performed data preprocessing including cleaning and label encoding for categorical features.
- Applied Optuna for hyperparameter tuning and evaluated using RMSE, MAE, and R^2 metrics.
- Integrated SHAP for model explainability (feature importance, beeswarm, waterfall plots).
- Deployed as a Flask REST API with a React.js frontend for real-time predictions.
- GitHub: <https://github.com/sathiska567/Z-Score-Predictor---ML-Project.git>

Game Sync Pro - Cricket Management System

2023 – 2024

- Led API development for seamless front-end to back-end communication in second-year project
- Crafted dashboards, admin panels, cricket match fixtures, and player profiles
- Mentored by BISTEC Global throughout the development process
- Technologies: React.js, AntDesign, Node.js, Express.js, MongoDB
- [Linkedin Demo](#)

AvStore Payment Integration

June 2025

- Developed and integrated Koko Payment and card payment modules into AvStore's e-commerce platform using Seylan Bank's payment gateway APIs.
- Implemented secure transaction processing, including request validation, error handling, and payment status tracking.
- Ensured PCI-compliant payment flow, safeguarding user card information and sensitive data.
- Tested and deployed end-to-end payment workflows for multiple payment methods, reducing failed transactions and improving checkout success rate.
- Collaborated with backend and frontend teams to streamline integration with existing platform architecture and improve user experience during checkout.
- URL - <https://www.avstore.lk/>

University Course Management System

Dec 2024

- Developed a University Course Management Mobile App using Flutter for cross-platform mobile development.
- Used Firebase for backend services including authentication, real-time database, and cloud storage.
- Implemented role-based access control, giving students and lecturers different permissions and workflows.
- Lecturers can schedule lectures, manage modules, and view student assignments.
- Students can enroll in modules, submit assignments, and receive updates.
- Integrated email notifications for lecture schedules, triggered via Playwright through Cron jobs for automation.
- Ensured real-time updates, secure data management, and automated backend task handling using cloud technologies.

G.U. Language Centre Student Record System

Dec 2023

- Created student record system for G.U. Language Academy to enhance Cambridge English exam preparation
- Hosted on Amazon EC2 with HTTPS for secure access
- Implemented comprehensive student management and payment tracking features.
- Technologies: React-Vite, AntDesign, Node.js, Express.js, MongoDB
- [Linkedin Demo](#)

E-Commerce Platform for Clothing Brands

Aug 2025

- Contributed as a Full Stack Developer to a user friendly e commerce platform connecting customers with clothing brands. Implemented frontend, backend, and Docker-based deployment to enhance scalability and streamline development.
- Technologies - React , SpringBoot , MySQL , Docker

EDUCATION

University of Moratuwa - B.Sc. (Hons.) in Information Technology

- Graduated: August, 2026

Current GPA : 3.42 out of 4.00 - (upto Level 04 semester 01)

Level 02: semester 01 - 3.77

Level 04: semester 01 - 3.68

Level 02: semester 02 - 3.59

D.S. Senanayake College, Ampara | 2017 - 2021

GCE Advanced Level (2021) - Physical Science Stream

- Z-score: 2.0681
- Combined Mathematics A | Chemistry A | Physics A

ACHIEVEMENTS AND PARTICIPATIONS

CodeRush(2023)

A Coding Competition organized by INTEC, Faculty of Information Technology, University of Moratuwa. Our team, codeSaki, secured the 4th place in the competition.

Duothan 4.0 (2023) - Finalist

A Web design Competiton organized by IEEE society University of NSBM.

MoraXtream(2022) - participate

A Coding Competiton organized by IEEE society University of Moratuwa.

EXTRACURRICULARACTIVITIES

IEEE student Branch - University of Moratuwa

- MoraXtream 7.0(2022) Hackthon web design commitee member
- RiseUp mora(2023) web team member
